- b) Fill in the blanks with appropriate articles 04
- 1) He studies in ----- university.
 - 2) She saw ----- elephant.
 - 3) Socrates was ----- wisest of Philosophers.
 - 4) Virat Kohli plays ----- cricket.

c) Make a précis of the following passage.

There is an enemy beneath our feet- an enemy more deadly for its complete impartiality. When an earthquake strikes, the world trembles. The power of a quake is greater than anything man himself can produce. But today scientists are directing a great deal of their effort into finding some way of combating earthquakes, and it is possible that at some time in the near future mankind will have discovered a means of protecting itself from earth- quakes. If it strikes a modern city, the damage it causes is as great as if it has struck a primitive village. Gas mains burst, explosions are caused and fires are started. Underground railways are wrecked. Building collapse, bridges fall, dams burst, and gaping crevices appear in busy streets. If the quake strikes at sea, huge tidal waves sweep inland. If it strikes in mountain regions, avalanches roar down into the valley. Consider the terrifying statistics from the past 1755: Lisbon, capital of Portugal- the city destroyed entirely and 450 killed. 1970: Peru: 50,000 killed. In 1968 an earthquake struck Alaska. As this is relatively unpopulated part; only a few people were killed. But it is likely that this was one of the most powerful quakes ever to hit the world. Geologists estimate that during the tremors, the whole of the state moved over 80 feet farther west into the Pacific Ocean. Scientists are dealing with forces so immense that man cannot hope to resist them. All that can be done is to try to pinpoint just where the earth- quake will strike and work from there. At least some precautionary measures can then be taken to save lives and some of the property.
